

SPLIT

ROUTE EVERY PAYMENT WHERE IT BELONGS

NOMBA HACKATHON · TEAM CYBORTEX TECHNOLOGIES

A Problem We Experienced Firsthand

Our institution adopted centralized fee collection — students paid once for school fees, faculty dues, departmental dues, and association dues. Payments were easy. Distribution was not. And as an active Student Union Official, I experienced first hand how this hampered progress for every student association that depended on dues that were added to the school fees payment.

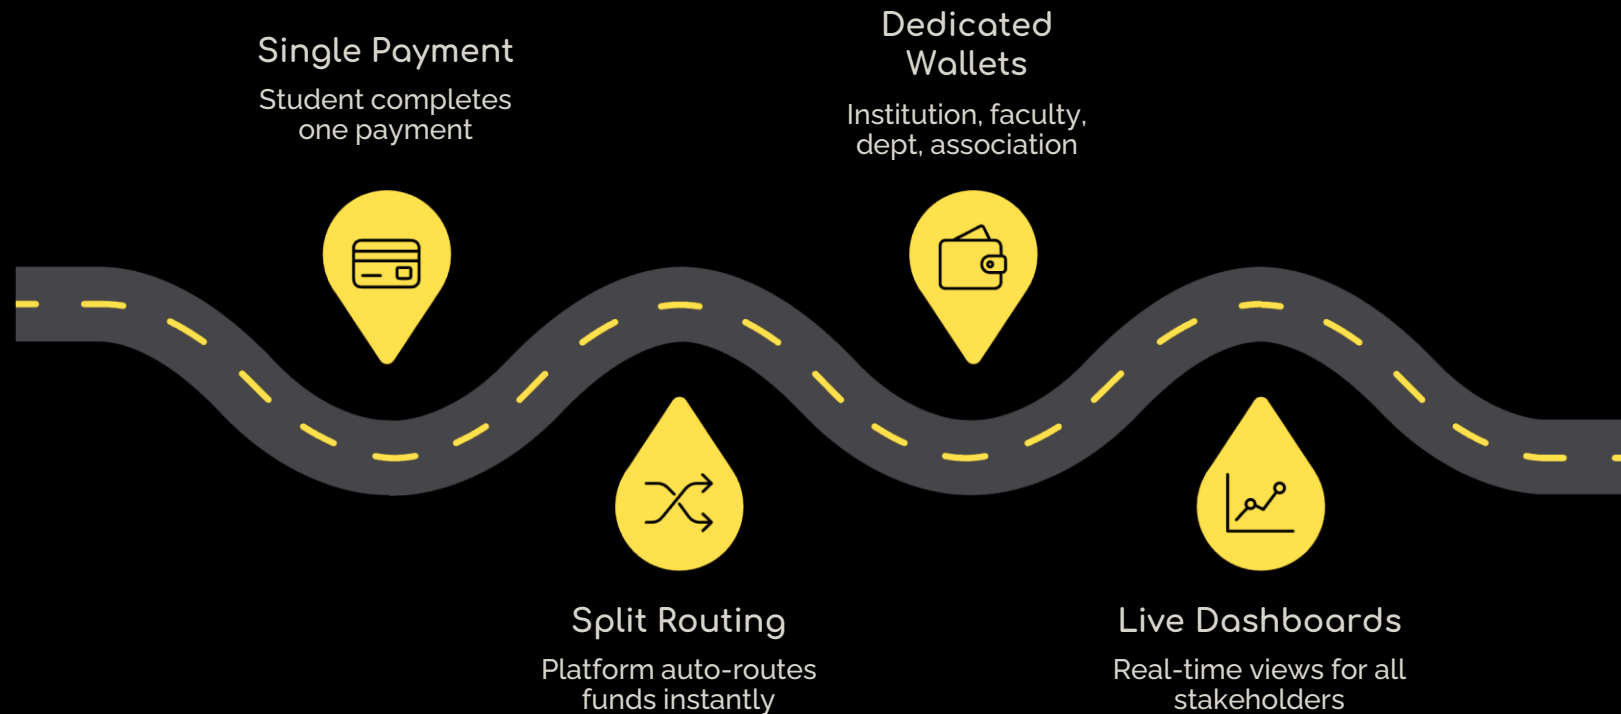

Centralized Collection. Delayed Disbursement

Payments intended for faculties, departments, and student associations are frequently delayed due to reconciliation processes and administrative bottlenecks, leaving stakeholders without visibility into collections or expected disbursements. The result is delayed projects, reduced accountability, financial disputes, and a loss of trust across the institution

One Payment. Automatic Allocation.

Split is a financial routing platform that automatically distributes institutional payments according to predefined allocation rules. When a student pays once, funds are instantly routed to the right wallets — with full transparency for every stakeholder.

Every stakeholder — from faculty heads to student executives — gains immediate visibility into their allocated funds through real-time dashboards.

Existing Solutions

Dedicated fintech for institutional fee collection at association level

Even onboarding just five institutions demonstrates the scale of the opportunity. Capturing only a fraction of their annual payment flows represents billions of naira in transaction volume while introducing a new level of transparency and financial governance to institutional payments.

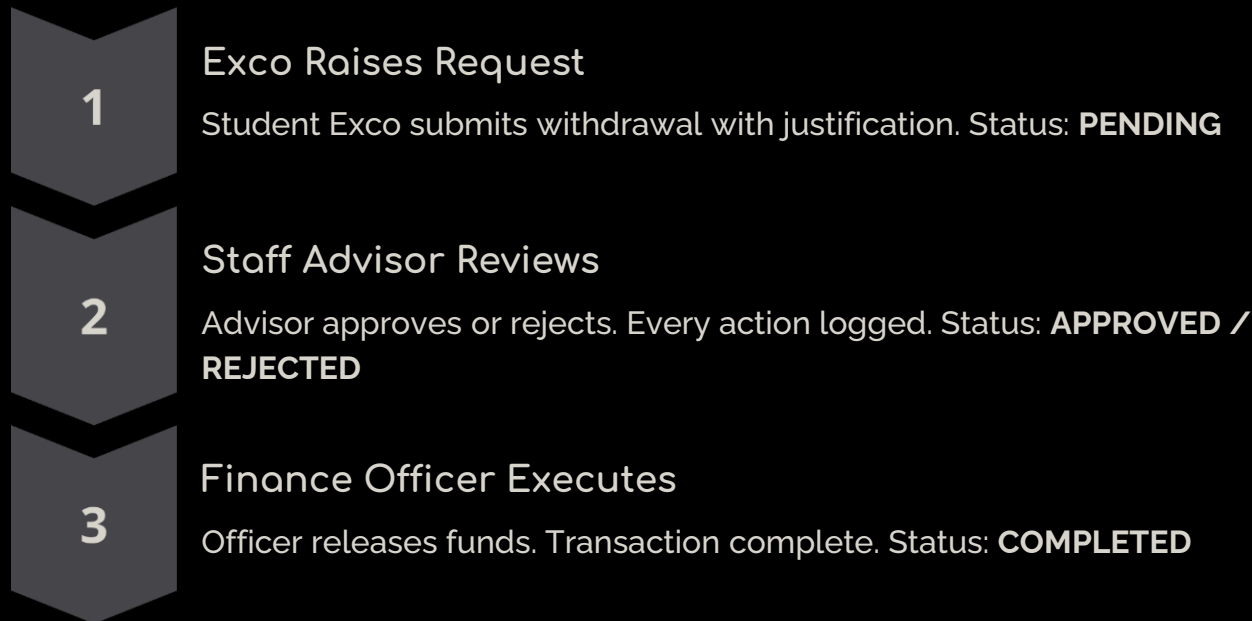

How Split Works — A Student's Journey

One payment. Multiple wallets. Full traceability. The entire fee lifecycle — from collection to disbursement — is automated, governed, and auditable within a single platform.

No Single Person Controls Institutional Funds

Split introduces a role-based approval workflow that separates financial visibility from spending authority. Every action is permanently recorded through immutable audit logs — creating accountability while protecting institutional funds.

1. TRANSACTION FEES

Small fee on every successful payment processed through Split.

HOW WE EARN

X% per transaction
(Charged to payer)

2. SAAS SUBSCRIPTIONS

Monthly or annual subscription for institutions based on size and needs.

HOW WE EARN

Tiered pricing based on students / modules / usage

3. IMPLEMENTATION & SETUP FEES

One-time fees for onboarding, custom setup and training.

HOW WE EARN

One-time fee per institution onboarded

4. VALUE-ADDED SERVICES

Optional premium services that institutions can opt into.

- ✓ Advanced analytics & reports
- ✓ Audit & compliance tools
- ✓ Priority support
- ✓ Custom integrations

RECURRING. GROWING. DEFENSIBLE.

A mix of recurring and usage-based revenue that grows with every payment processed on the platform.

BUILT FOR SCALE.

More institutions. More payments.
More volume. More revenue.

SUSTAINABLE IMPACT.

Strengthening institutional financial transparency while creating sustainable revenue.

Leveraging Nomba for Secure Institutional Payments

01

Unified Student Checkout (Collection)

Instead of forcing students to make 4 different transfers to 4 different accounts (we use Nomba's **Checkout API**). The student generates a single consolidated invoice, and Nomba processes the entire payment securely in one seamless transaction.

02

Automated Ledger Splitting

When the payment is initiated, our Convex backend mathematically splits the transaction amount based on the precise fee schedule configured for that specific student's level and department.

03

Multi-Signature Disbursements

When an association requests a withdrawal and it successfully passes the strict multi-signature consensus pipeline

04

Virtual Wallet Provisioning

Through the architecture we built, every distinct tier of the institution is assigned its own dedicated **Wema Bank Virtual Account**.

05

Real-Time Webhook Synchronization

When students complete their checkout, Nomba fires a secure, HMAC-verified webhook to our backend. Our database idempotently processes this webhook, instantly marks the student's fees as "Paid", and automatically routes the split funds into the correct virtual wallets in real-time.

Growing Campus by Campus

Our phased approach ensures strategic expansion, building on initial successes to capture the vast institutional finance market.

Phase 1: Pilot Programs

Launch with select universities featuring active Student Affairs and bursary departments.

Phase 3: Broader Educational Reach

Scale into polytechnics, colleges of education, and education boards.

Phase 2: Institutional Expansion

Expand across federal, state, and private institutions via referrals and strategic partnerships.

Long-term: Diverse Sector Growth

Extend the platform into financial infrastructure for associations, NGOs, and public institutions.

More Than a Payment Platform

Split is purpose-built to address the unique complexities of institutional finance, offering specialized capabilities that go far beyond generic payment collection or record management systems.

Capability	Traditional School Portals	ERP Systems	Split
Collect Payments	Yes	Yes	Yes
Manage Student Records	Yes	Yes	No (integrates)
Automatically Routes Funds	No	No	Yes
Provides Real-Time Transparency	No	Limited	Yes
